Date :2011-09-01 version 1. Water is to ensure social progress and economic development of the key factors. With the rapid development of industry and agriculture and the sharp rise in population. increasing water pollution. How to clean micro-polluted water bodies. to produce high-quality domestic water. has an impact on the ecological environment of China and the harmonious development of the world's important issues. By Zhang Yang and Li Guangzhe compiled a carbon - Nanofiltration in micro-polluted source water in the Theory and Application for the situation of water resources. types of pollutants in water. micro-polluted water recovery technology were introduced. highlighting the Activated carbon - carbon technology and bio-film technology as the core of the micro-polluted source water treatment technology. Activated Carbon - Nanofiltration in micro-polluted source water in the Theory and Application. rich in content. lists more experimental data. charts and test results; in writing on both theoretical and practical attention. These experimental data are controlled by micro-polluted source of water-based research is an important knowledge base for in-depth fundamental research. to promote the activated carbon and membrane separation technology in the field of water treatment in industrial applications to lay a solid foundation. Activated Carbon - Nanofiltration in micro-polluted source water in the Theory and Application can be used as municipal engineering. water conservation. environmental science and engineering technicians and engineering reference book for researchers. but also for research in membrane separation technology the production and use of relevant professional institutions of higher education teachers. graduate and undergraduate reference. Contents: Preface Chapter 1 water pollution situation in the status of water resources and water pollutants 1.1 1.1.2 1.1.1 Status of China's...
